

# Logic Controls LS9000 (1.64 Firmware) Kitchen Video System (KVS) Hardware and IP Configuration Guide

**This document will cover connecting the LS9000 Kitchen Video System hardware and changing the IP Address of that unit as well.**

**This guide is for the LS9000 units that have the 1.64 firmware version.**

**For the Bumpbar to work with the LS9000 control unit a special cable (P/N: KB-1700-PSM) which has a PS-2 connection to a RJ11 connection, is required.**

## Connecting the LS9000 Hardware

You will need the following items to set up your kitchen video system:

LS9000

Bumpbar (P/N: KB1700G)

Requires cable (P/N: KB-1700-PSM) to work with LS9000.

Follow these steps to set up the hardware:

1. Plug **end 2** of **cabl e 1** into **end 1** of **cabl e 2**.
2. Plug **end 1** of **cabl e 1** into a power outlet.

3. Plug one end of **cabl e 3** into the appropriate port on the monitor.

4. Plug **end 2** of **cab**le 2, the **bump bar**, and the remaining end of **cab**le 3 into the **Logic Net LS9000**.
5. If the network cable is not plugged into the LS9000, plug it in now.

6. Turn on the monitor.
7. After a few seconds, something will be displayed on the screen.

## Configuring the LS9000 with Firmware 1.64

1. On the front of the LS9000, press either the reset button or the power button twice (once to turn the unit off and then again to turn it on).

2. Press the 3 Button (on the bumpbar or a connected USB keyboard) – This will enter the IP/Resolution screen.
3. Press the In Progress Button (on the bumpbar) – This will need to be done until the DHCP Option is highlighted.
4. Press the Menu Button (on the bumpbar) – This will Disable the DHCP Option (With this option disabled the IP is then changed to a Static IP). There is no Reason to change the IP, as the device is already using an IP address that wasn't already in use by any other device on the network.
5. Press the In Progress Button (on the bumpbar) until the OK Button is highlighted.
6. Hit the Return Button (on the bumpbar) – This will save all of the settings.
7. Press 0 button (on the bumpbar) to continue.
8. After configuring the device in CRE/RPE (and starting the services), you MUST then restart the CRE/RPE application.

To configure the LS9000 in CRE/RPE please see the document link below:
